Job Portal

1. Introduction

1.1. Propose of the Vision Document

It is used to show the final product or software to be created and the progression through the product/software development. It will very helpful when it comes to capturing ideas and ensuring that all parties involved communicate clearly about those ideas.

1.2. Product Overview

Job Portal will provide platform to young generation as it will bridge gap between companies and job seekers. A single window will be provided to all the stakeholders so that they can effectively and transparently fulfill the recruitment process.

1.3. References

No special reference as such available.

2. User Description

2.1. User/Market Demographics

Currently there is a shortage of job related solutions in the industry major platforms are lacking in fulfilling the market needs and requirements. So this portal will cater those needs and other requirements.

2.2. User profile

There will be 2 types of intended users one is Admin and second is Users(Public) who will use this system to apply for Jobs. Similarly Admin will control and monitor backend of the system. Users will need to have certain qualifications in order to be able to get facilitated from the portal.

2.3. User Environment

This is a Web-based project so it will not deploy in any other organizations. It will be managed by the Admins themselves. Where as customers will upload their CVs, and these CVs will be used then to apply for specific jobs.

2.4. Key User Needs

- Single Window.
- Centralized Data.
- Web Based App.

2.5. Alternatives and Competition

Currently, in the market, we have multiple alternatives like LinkedIn, Indeed etc.

3. Product Overview

3.1. Product Position Statement

For	Job Seekers and Companies
Who	To bridge gap btw Companies and job seekers.
Job Portal	Is web-based application.
That	User will be able to apply to several jobs after creation of CV and Login.
Unlike	Indeed, Seeks, etc.
Our product	CV creation option is not available in most portals.

3.2. Summary of Capabilities

Customer Benefit	Supporting Feature
Easy to Apply	The users can easily apply to jobs.
Easy to Upload CVs	The users simply go to the portal and create a CV.
Easy to Track	The users visit their portal, to check their application status.

3.3. Assumptions and Dependencies

The system is designed as Web-based so it will be optimized to run on all the platforms like Mobile phones, Mac OS, Windows, etc. Internet connection will be needed to access the portal. Users should be computer literate and also familiar with internet apps in order to fully enjoy the experience.

3.4. Cost and Pricing

There is no cost come to develop this software because it is a semester project, the only need for this project is a laptop and a good internet connection.

4. Feature Attributes

4.1. Authentication System

Status	Incorporated
Priority	Critical
Effort	Medium
Risk	Medium
Stability	High
Target release	Version 1.0
Assigned to	Hammad
Reason	Without this. system's security will be compromised.

4.2. Jobs

Status	InProgress
Priority	Critical
Effort	High
Risk	Medium
Stability	High
Target release	Version 1.0
Assigned to	Hammad
Reason	Without this the main idea behind this project will be failed.

5. Product Feature

5.1. User Authentication

5.1.1. Registration will be done

5.1.2. Based on given details, user will have to enter those credentials in order to use.
